Blockchain developer salary?

5

self.ethereum

Submitted 1 month ago by **Randomizer91**

Hi,

I am about to finish a Computer Science degree and I was thinking about learning a lot of blockchain development including Ethereum's smart contracts development.

Do you know what the actual salaries are out there?

Do you think that because of the high demend in the future, this kind of Knowledge can be really profitable?

Thanks

Depends on your location (cost of living), experience and company type (startup or big company). Should be close to typical software engineering salaries. It is after all, software developing.

There is certainly a supply/demand imbalance right now, and blockchain experience will be a valuable commodity which should make you very employable and give you lots of options.

Don't think that you're necessarily going to be paid more to work on blockchain than you would in any other

Rules

- No inappropriate behavior. This includes, but is not limited to: personal attacks, threats of violence, slurs of any kind, posting people's private information.
- **Keep price discussion and market talk, memes & exchanges to subreddits such as /r/ethtrader**
- Keep mining discussion to subreddits such as /r/EtherMining.
- No duplicate threads.
- No spamming or drive by posting.
- No misleading titles.
- No creating multiple accounts to get around Reddit rules.
- English language only. Please provide accurate translations where appropriate.
- Posts and comments must be made from an account at least 10 days old with a minimum of 20 comment karma. Exceptions may be made on a

software engineering role. Most of the time higher wages come with living in big, expensive cities (New York, London) or doing very boring jobs (banks). Or you have more upside in the form of equity/options/tokens by being involved in a riskier startup.

To me, the best part about getting involved now is that it is fun and interesting work, with the potential to improve the world we live in.

I'm in the same boat as you. I'm going to spend the majority of my free time this year writing Solidity. Since this is my last year.

180-210k, with at least a full product cycle, full stack, and at minimum a few years experience.

It could be profitable.

My company is hiring Ethereum engineers. My recruiter mentioned that we're looking at $200K base, $40K bonus and $1M worth in shares.

LOL. I wish.

Most companies in the space are startups and don't have money to burn. If anything, salaries are likely to be slightly below average for software engineering roles, but with a lot more in the way of equity. And with more fun/freedom.

Many people are contractors.

discretionary basis.
